

THE CYBERSECURITY EFFICIENCY CHALLENGE

BREAK THE CYCLE

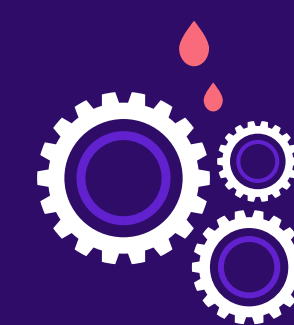

BALANCE YOUR SECURITY POSTURE

optimize enterprise security posture by correlating security configuration, logs, vulnerability data, and sensor telemetry of your security solutions to proactively identify both postural gaps and adverse impacts to business applications

DON'T RESPOND LATE. AUTOMATE.

Automated analysis of security stack posture and use to create actionable insights that identify potential misconfiguration and security gaps, find the root cause and remediate them before any business outage or security event occurs.

REDUCE OPERATIONAL FRICTION

Amplify and augment your security teams' efficiency by providing a single platform to automatically analyze, triage, and remediate postural gaps, reducing effort and time spent in manual oversight and problem solving.

Veriti is a unified security posture management platform that integrates with the entire security stack and proactively identifies and remediates potential risks and misconfigurations to maximize security while ensuring business uptime
