

# UNIFIED SECURITY POSTURE MANAGEMENT

Proactively detect and remediate postural gaps to maximize your security posture and business uptime

## OWN YOUR SECURITY POSTURE

Veriti is a unified security posture management platform that integrates with the entire security stack and proactively detects and remediates security gaps and business disruption anomalies across the organization's infrastructure and attack surface. Using predictive and trailing analytics tools, Veriti identifies potential risks and provides actionable insights to remediate them before any business outage or security event occurs.

## PRE-BREACH HARDENING

Your security teams can easily identify postural gaps, misconfigurations, and false positive events across every integrated solution and remediate them before they impact application or network performance. Veriti reduces operational friction and augments security teams' efforts in responding to cyber threats using pre-breach insights (based on business-impact prediction models), root cause analysis, and automatic understanding of the solutions' configuration, the security infrastructure and its effect on the risk exposure.

## KEY BENEFITS

**Complete visibility** into the entire security stack, the overall preventative maintenance level and active vulnerabilities.

**Gain immediate ROI** by optimizing all security controls while ensuring business uptime, based on predictive and trailing analytics and machine learning.

**Amplify efficiency** of security teams' by providing a single platform to automatically analyze, detect, triage, and remediate postural gaps
