

VERITI AND TORQ

How to hyperautomate exposure remediation with Torq and Veriti to proactively monitor and remediate risk, vulnerabilities, and misconfigurations from the OS-level and up

EXECUTIVE SUMMARY

The Veriti and Torq integration heralds a new era in cybersecurity efficiency and effectiveness. By combining Veriti's cutting-edge exposure assessment and remediation with Torq's enterprise-grade, AI-driven hyperautomation platform, organizations can now automate their remediation workflows like never before. This powerful synergy not only accelerates MTTR but also significantly reduces the risk of cyber threats, all while ensuring seamless operational continuity. Together, Veriti and Torq empower security teams to focus on strategic initiatives by automating routine tasks, safely remediating exposures and enhancing overall security posture with minimal effort.

A PROACTIVE APPROACH WITH VERITI AND TORQ

Torq's effortless integration capabilities with any technology out there, represent a leap forward in cybersecurity automation, allowing for seamless connectivity across an extensive array of tools and platforms and future-proofing additional technologies that will be introduced to the stack. Its AI driven approach enables security teams to rapidly deploy simple as well as sophisticated workflows that respond to threats in real time, enhancing the agility and efficiency of security operations. By simplifying the integration process, Torq empowers organizations to create a more resilient and responsive security posture, tailored to their unique needs and processes.

Veriti's role in this partnership focuses on bringing exposure assessment and remediation across the enterprise. Veriti consolidates all security configurations to establish a security baseline within the organization. Leveraging advanced analytics and machine learning, Veriti identifies and prioritizes vulnerabilities, offering automated root cause analysis and safe remediation that guarantees zero business disruptions. This proactive approach ensures that potential security breaches are addressed before they can be exploited, significantly reducing the organization's risk profile and enhancing its overall security infrastructure.

Traditionally, automated exposure identification and response solutions, especially in the context of SOAR (Security Orchestration, Automation, and Response), involved complex, manual processes that were both time-consuming and prone to error. Legacy SOAR solutions often required specialized knowledge to operate and struggled to integrate smoothly with other security tools, leading to gaps in defense mechanisms and delayed response times. The integration of Torq and Veriti addresses these issues head-on, providing a streamlined, effective solution that not only accelerates proactive responses to exposures but also ensures a more comprehensive and effective approach to cybersecurity management.

SOLUTION BENEFITS

Exposure Assessment and Remediation in One Click

Enhanced Security Automation

AI-Driven Efficiency

Rapid Response to Threats

Automated Threat Protection (IoC Management)

KEY FEATURES

Comprehensive Visibility into all exposures and misconfigurations across the security infrastructure.

Actionable Insights within Minutes by continuously analyzing your security controls, Veriti provides data-driven insights that simplify investigations and reduce MTTR dramatically.

Optimize Resources- Maximize security efficiency with automated assessment and advanced security controls optimization capabilities.

One Click Remediation without Business Disruption- Identify the root cause, filter out false positives and automatically mitigate risk with confidence as every change is verified to not cause business disruption.

 <p>Assess Exposures and Security Configurations</p>	 <p>Generate Exposure Insight With Root Cause Analysis</p>	 <p>Automation Of Insight Into Preferred ITSM (Slack, Jira, ServiceNow, Etc.)</p>	 <p>Remediate Without Business Disruption</p>

JOINT USE CASES

Automated Vulnerability Remediation

Upon detecting exposures, such as vulnerabilities, threats and misconfigurations, Torq automatically pushes Veriti’s safe remediation protocols into your preferred workflow (ITSM) to proactively patch or mitigate exposures across the enterprise.

Accelerate Approval Cycles

Automatically share exposure assessments with multiple parts of the security and IT organization, promoting coordinated responses for safe remediation of exposures. Rapidly approve security changes without friction or issues to the operational business functions.

Streamlined Incident Management

Integrates Veriti’s detailed security insights with Torq’s workflow automation to identify, prioritize, and respond to incidents faster.

Full audit trail of the cause, decision and remediation results aggregated in Torq’s Cases.

Safe remediations are performed in one click.

Veriti is a fast-growing cybersecurity innovator that helps organizations maximize their security posture while ensuring business uptime. With Veriti, organizations can eliminate complexity and operational friction in managing multiple cybersecurity solutions with a consolidated, governing platform that proactively monitors and in a single click, remediates security gaps and misconfigurations across the entire security infrastructure.
